Intra-Lock’s Bone Profilers are designed for the manual removal of crestal bone that may grow over the implant platform during the healing stage. They are engineered for the safe and effective cleansing of the implant platform.

Bone Profilers are precisely centered via an Alignment Post, enabling the removal of any excess bone without affecting the precision surface of the platform. This procedure ensures the accurate seating of restorative components.

The Profiler Kit includes three Bone Profilers and their corresponding Alignment Posts. They accommodate SQ (Narrow Interface), ST (Standard Interface) and WD (Wide Interface) Intra-Lock internal implant platforms.

**Bone Profiler**

**REFERENCE NO.……PRODUCT DESCRIPTION**

BPK.............................. Bone Profiler Kit

The Profiler Kit Contains the following:

- BPSQ.......................... SQ Bone Profiler
- BPAPSQ........................ SQ Alignment Post
- BPS............................. ST Bone Profiler
- BPW............................. WD Bone Profiler
- BPAP............................ ST & WD Alignment Post (x2)

The BPAP Alignment Post is used with both the Standard and Wide Interfaces (two included in kit). The Bone Profilers and their matching Alignment Posts can be ordered separately.

1: Top of implant with bone overgrowth.
2: Alignment Post is placed and finger-tightened with the HD Hand Driver.
3: The Bone Profiler is placed over the Alignment Post...
4: ...and is rotated until the platform surface is clean.
5: Bone debris is visible in the Bone Profiler’s flutes on implant platform...
6: ...free from bone overgrowth.
The same controlled profiling of the bone around the coronal aspect of the implant can be accomplished utilizing the convenient Contra-Angle Bone Profile design. It is compatible with an ISO-Latch type handpiece.

Contra-Angle Bone Profile Kits are available for the UnHex, InDex and Gold & Blue Implant Systems.
